Education in soundscape - A seminar with young scientists in short term scientific mission "Soundscape - Measurement, Analysis, Evaluation"

*A short term scientific mission initiated through Cost TD0804 was carried out for evaluation, measurement and analysis of soundscapes. Several young researchers were introduced in binaural measurement technology, enhanced sound analysis, evaluation techniques, procedures and had the opportunity to perform field and laboratory tests. For the course measurement technology and workstations were available and a team of experienced researchers trained and supported the young researchers. In collaboration with qualified soundscape researchers short case studies including measurement, analysis, evaluation, and classification of defined environmental areas was carried out. The teaching was based on educational modules of the different research steps. This education concept will be presented and discussed based on experiences of both the teachers and the young scientists. Acknowledgements: COST TD 0804: Soundscape of European Cities and Landscapes.*
